

The Bin experts in the Lowveld since 1991

“ Bin sizes and styles are determined by customer specification and range from a disposable type for export to a reusable type.”

These bins are useful for the harvesting, transportation and storage of fruit, vegetables and Atcha. The bins are produced from kiln dried timber which is planed all round with the option of having rounded edges to protect the product from being bruised and damaged. Bin sizes and styles are determined by customer specification and range from a disposable type for export to a reusable type.

They are manufactured with galvanised metal corners and posi-driven bin screws to strengthen the bin. They may be purchased fully assembled or in a knockdown form.
